

**'Prodis'** (Production Information System) is our software solution for manufacturing.

Designed with professionals in the manufacturing industry, PRODIS covers all related business and financial aspects.

The system is ready to integrate any independent financial system.

Business approach goes from the products formulas' definition, till the valuated stock update, via the tasks scheduling, production orders, costing, previsions ...

The system includes 4 modules: Accounts payable, Accounts Receivable, production and stock management, all fully integrated.

**Platform:** many parameters could be defined

- ✓ Formulas' definition
- ✓ Finished products, semi-finished products, raw materials,
- ✓ Production lines, brands, indirect costs ...
- ✓ Suppliers, customers ...

**Hard core**

- ✓ Customer sale order
- ✓ Production orders management: to decide the schedules to set.
- ✓ Production schedule: automatic quantity reservation
- ✓ Production costing per job: enter the real quantity produced, the real raw material quantities used.
  - The system updates the stock automatically
  - It creates a detailed cost sheet ready to give figures and reports.
- ✓ Supplier purchase order

- ✓ Stock transactions including receiving, transfer, waste,...

## Reporting

Many reports have been designed to give the decision makers and the different users a clear vision regarding stock management, production, forecasting, orders status, inventory,...
